Professional Summary

Backend Engineer with 2 years of experience building scalable backend systems and AI-powered applications. Specialized in multi-agent RAG architectures, vector search pipelines, and LLM-integrated services using Node.js, Redis, and Docker. Proven ability to independently architect and ship production systems including AI assistants, RBAC-based platforms, REST APIs, payment integrations, and cloud storage solutions.

Experience

Cancer Mitr / OneMi

Nov 2024 – Present

Backend Engineer

Mumbai, India

- Co-architected and shipped the backend for OneMi App – a production health platform – using Node.js, Prisma, MySQL, Redis, and Docker; engineered 30+ REST APIs supporting AI workflows, authentication, payments, and user data management.
- Designed a multi-agent RAG system with an Orchestrator Agent and 4 specialized agents (general info, product recommendations, lab report analysis, ticketing); implemented LLM-based inter-agent routing with no keyword matching to improve accuracy and response quality.
- Engineered context-aware AI conversations using a rolling summary architecture with a 15-message window; integrated OpenAI Responses API (GPT-4o, GPT-4o Mini, text-embedding-3-small 1536-dim) and Qdrant vector DB for semantic search.
- Built a FHIR-compliant health data pipeline: AI model extracts lab values, abnormal findings, and diagnostics from uploaded reports; results are queued via BullMQ and consumed by a dedicated FHIR service that structures and stores the data to standard.
- Built complete monetization backend: per-user token logging, Razorpay payment gateway, cart system, and OTP-based auth with Redis caching to reduce DB load.
- Architected RBAC across 5–6 tables for fine-grained access control; migrated file storage to Amazon S3 with a dedicated bucket for centralized application logging.
- Built REST API backends for CancerCost Calculator and Symptom Tracker using Laravel and MySQL.

Uponly Technologies

Jan 2024 – Aug 2024

Full Stack Web Developer Intern

Mumbai, India

- Built HRMS Portal (React, Redux Toolkit, PHP/SQL) with employee management, payroll, and attendance tracking features.
- Contributed to a unified Web Admin Portal integrating HRMS and Lead Management System (LMS) with focus on security and scalability.
- Built REST APIs in PHP/SQL for Uponly Pro mobile app backend; coordinated with frontend developers for integration.

Projects

Personal Backend Server on Android | Node.js, Redis, PostgreSQL, Nginx, PM2, Cloudflare Tunnel

- Runs a full production-grade backend stack on a Redmi 9 phone via Termux; exposed publicly via Cloudflare Tunnel bypassing CGNAT, with PM2 process management and Nginx reverse proxy.

Technical Skills

Languages: JavaScript (Node.js), PHP, SQL

Backend: Node.js, Express, Laravel, Prisma ORM, REST APIs

Databases: MySQL, PostgreSQL, MongoDB, Redis, Qdrant (Vector DB)

AI / RAG: OpenAI API (GPT-4o, GPT-4o Mini, text-embedding-3-small), Multi-Agent RAG, Vector Search, Context Engineering

DevOps / Cloud: Docker, Amazon S3, Nginx, PM2, Git, GitHub

Tools: Postman, Razorpay, Prisma Migrate

Education

Mumbai University

2019 – 2023

B.E. in Mechanical Engineering

CGPI: 8.29

Achievements

Silver Medal – State-Level Boxing Championship.
